

nWET™ – nonwoven edge trim fabric

JONES FAMILY OF COMPANIES

- **nWET**— nonwoven edge trim is a by-product in variable widths of 1/2 inch to 2 inches.
- the nonwoven is a premium basis weight with a blend of rayon and polyester.
- **nWET** has an absorption rate of 650% to 700%; significantly higher than market accepted spun rayon blend yarns.
- the fabric has a very soft hand similar to baby-wipe material.
- the combination of bulk and absorption performance allows the actual weight of material to be reduced by 40% to 50% to produce a similar size mop.
- **nWET** is an ideal alternative to spun yarns for specific limited-use mop applications.

nWET - NONWOVEN EDGE TRIM [rayon, polyester blend] 1, 10 & 24 ends

nWET2 - FLAT & TWISTED [rayon, polyester blend] 1, 10 & 24 ends

JONES acknowledges that the mop industry is changing at a rapid pace with global impact. Rising raw material costs around the world requires that our industry expand our thinking. Product innovation is no longer a competitive advantage; it is a requirement just to stay in the market. **nWET** or nonwoven edge trim is reclaimed by-product generated during the web forming process.

nWET is an innovative alternative material that meets or exceeds the performance requirements of conventional economy spun yarns. The absorption ranges from 600% on the original **nWET** and up to 1000% on the **nWET2**. The bulk of the **nWET** strips also allows you to manufacture an equivalent mop using as much as 50% of the weight required in the conventional string mop. These two factors alone position **nWET** as a viable alternative raw material. **nWET** is available in white premium gauge fabric weights. The material is a blend of rayon and polyester with a soft texture similar to the nonwoven fabric found in baby-wipes. The material is available in single end, 10 or 24 multiple end packages. **nWET** and **nWET2** are ideal for limited-use or disposable applications.
