

## Environmentally Responsible Solutions

Today, consumers increasingly make buying decisions with environmental responsibility a high priority.

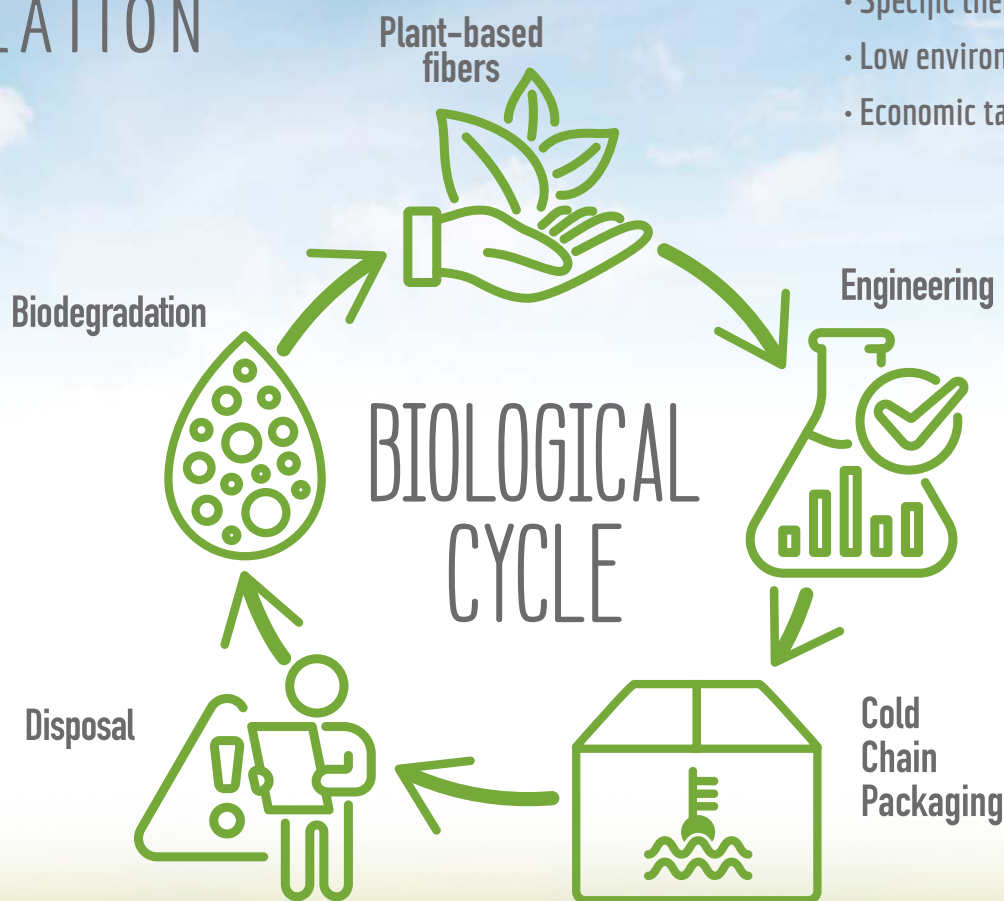

Desirable brand choices include products with sustainable, low-environmental impact packaging. Almost every product imaginable, including frozen food, meal kits, pet food, and pharmaceuticals are delivered direct to consumers' doors.

Superior thermal performance plus low environmental impact: Jones Sustainable Packaging is the solution to today's demands for high quality temperature-controlled transit.

Manufactured with plant-based fibers, our liners are an economical and performance-tested low environmental impact packaging solution to meet the growing demand for sustainability and ecological responsibility.

# Environmentally friendly INSULATION

- Fiber blends engineered for:
- Specific thermal performances
  - Low environmental impact
  - Economic targets

## Plant-Based Fibers

Our sustainable shipping solutions are born of the earth. We choose to craft our products from materials such as cotton, hemp, jute, and recycled textiles to meet cold-chain shipping requirements without compromising the long-term health of our planet.

## Engineering

JONES fiber blends are specifically designed and rigorously tested to ensure optimal temperature maintenance and peak protection for delicate products.

## Cold Chain Packaging

We create packaging solutions that both, protect the products within, and delight the consumer with a gratifying unboxing experience.

## Disposal

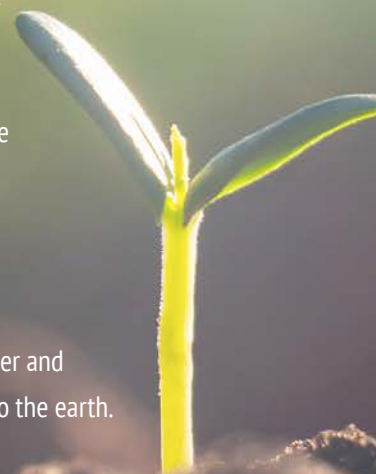

JONES packaging is intentionally engineered for easy recycling or reuse.

## Biodegradation

Our plant-fiber based products, with minimal environmental impact, biodegrade faster and more safely than plastics or polystyrene, completing the cycle from the earth, back to the earth.

## Product Innovation

Jones is a market leader in nonwovens engineered with sustainable fiber, and our plant-based fiber grades provide lab-tested, high-quality insulative and protective properties.

### Sustainable Fiber Blends Include

- COTTON
- NATURAL PLANT FIBER
- BAST FIBER (JUTE & HEMP)
- RECYCLED TEXTILE MILL BY-PRODUCTS
- ANIMAL FIBER (INCLUDING WOOL)
- RECYCLED POLYETHYLENE TEREPHTHALATE (POLYESTER)

### Our Cold Chain Packaging Insulation Offers:

- PROVEN THERMAL PERFORMANCE FROM THE LAST MILE TO EXTENDED 72-HOUR TRANSIT
- CUSTOM DIMENSIONS AND STANDARD STOCK CUBE LINER KITS
- FIBER-ONLY LINERS OR LINERS ENCAPSULATED WITH POLY FILM AND KRAFT PAPER

With new URAC standards being implemented in 2021 and 2022, the demand for products that perform to these rigorous standards will only increase the need for low environmental impact packaging solutions that work as well as traditional non-eco friendly products.
